

Meeting Report: First Team Meeting

Date: 6 June 2025

Group 6 Members: Marco Weber, Agnessa Fomina, Jue Hang, Ruonan Mi

Project Name: *Text-Search App*

Project Goal: Develop an app that allows users to input either a local text file or a Wikipedia URL, and search for words, lemmas, or parts of speech using OpenNLP.

1. Meeting Objectives

- Kick off the DSA2 project
 - Assign initial tasks and responsibilities
 - Plan collaboration and development workflow
-

2. Topics Discussed

- Overview of the project requirements
 - Initial brainstorming of app features
 - Assignment of team roles and responsibilities
 - Setup of communication channels (GitHub, Discord, WhatsApp)
 - Timeline planning
-

3. Decisions Made

Role Distribution

- **GUI (Java Swing):** Ruonan Mi
 - **Web Scraping:** Jue Hang
 - **Linguistic Processing (OpenNLP):** Agnessa Fomina
 - **XML Export & Executable JAR Packaging:** Marco Weber
-

4. Next Steps

- Schedule the next team meeting
- Share individual progress updates before the next session
- Each member will begin working on their assigned tasks
- Set up local development environments
- Research required tools and libraries (e.g., **Jsoup**, **OpenNLP**)
- Ensure GitHub access is working (push/pull permissions)
- Await relevant lectures before starting core implementation
